

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

DIN Pro

Highlights & Features

- Wide AC input voltage range 85-277 Vac (305 Vac/60s)
- Power Boost up to 150% for 5 seconds
- Full load operating temperature up to 60°C
- Wide operating temperature from -40°C to +80°C
- Built-in DC OK relay and LED indicator
- Built-in remote ON/OFF control
- Built-in current sharing for parallel application
- Meet IEC 61000-4-6 CS 20V rms
- Conformal coating on PCBAs to protect against common dust and pollutants
- IEC/EN/UL 62368, IEC/UL 61010, and IEC 61558 certified
- Compliant with SEMI F47 standard

Safety Standards

CB Certified for worldwide use

Model Number: DRF-□V960W1PBA
Unit Weight: 2.05 kg (4.52 lb)
Dimensions (H x W x D): 124.2 x 104.5 x 137.7 mm
 (4.89 x 4.11 x 5.42 inch)

General Description

Delta's DIN Pro Series DIN rail power supply features high power density and high efficiency. Other key features are the conformal coating on the PCBA and a 150% Power Boost for up to 5 seconds to meet the demands of inductive and capacitive load applications. The products are designed according to major industrial and electrical measurement category safety standards. In addition, the Series' radiated and conducted electromagnetic emissions comply with heavy industrial Class B Emission and Immunity standards, as well as the IEC 61000-4-6 CS (Conducted Susceptibility) with a 20V rms criterion. Other built-in features include DC OK contacts, an LED indicator for DC OK status, remote ON/OFF control, and a current sharing function. The products also meet environmental protection requirements in accordance with the RoHS and REACH directives.

Model Information

DIN Pro Series DIN Rail Power Supply

Model Number	Input Voltage Range	Rated Output Voltage	Rated Output Current
DRF-24V960W1PBA	85-277 Vac	24 Vdc	40 A
DRF-48V960W1PBA	(100-400 Vdc)	48 Vdc	20 A

Model Numbering

DR	F –	□V	960W	1	P	B	A
DIN Rail	Product Series F – DIN Pro	Output Voltage 24 – 24 V 48 – 48 V	Output Power	Single Phase	P – Power Boost	Connector Type B – Screw Terminal	Delta Standard (with conformal coating)

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Specifications

Model Number	DRF-24V960W1PBA	DRF-48V960W1PBA
--------------	-----------------	-----------------

Input Ratings / Characteristics*1

Nominal Input Voltage	100-240 Vac	
Input Voltage Range	85-277 Vac (305 Vac available for 60 seconds)	
Nominal Input Frequency	50-60 Hz	
Input Frequency Range	47-63 Hz	
DC Input Voltage Range*2	100-400 Vdc (Please refer to page 9 derating curve)	
Input Current	9.3 A typ. @ 115 Vac, 4.6 A typ. @ 230 Vac	
Efficiency at 100% Load	95.5% typ. @ 230 Vac	95.8% typ. @ 230 Vac
No Load Power Consumption	4 W typ. @ 230 Vac	5 W typ. @ 230 Vac
Max Inrush Current (Cold Start)	30 A typ. @ 230 Vac	
Power Factor at 100% Load	> 0.98 @ 115 Vac, > 0.96 @ 230 Vac	
Leakage Current	< 1.5 mA @ 230 Vac	

*1 All parameters not specially mentioned are measured at 230 Vac input and 25°C ambient temperature.

*2 Power Supply can operate at DC Input voltage, please connect +pole to L, -pole to N and PE terminal to an earth wire or to the machine ground.

Output Ratings / Characteristics

Nominal Output Voltage	24 Vdc	48 Vdc
Factory Set Point Tolerance	24 Vdc \pm 1%	48 Vdc \pm 1%
Output Voltage Adjustment Range	24-28 Vdc	48-55 Vdc
Output Current	0-40.0 A	0-20.0 A
Output Power	960 W max	
Line Regulation	\pm 0.5% @ 115 Vac & 230 Vac	
Load Regulation	\pm 0.5%	
PARD*3 (20 MHz)	< 100 mVpp @ 0°C to +70°C < 300 mVpp @ -30°C to 0°C	< 150 mVpp @ 0°C to +70°C < 450 mVpp @ -30°C to 0°C
Rise Time	30 ms typ. @ 115 Vac & 230 Vac	
Start-up Time	300 ms typ. @ 115 Vac & 230 Vac	
Hold-up Time	22 ms typ. @ 115 Vac & 230 Vac (100% load)	
Dynamic Response (Overshoot & Undershoot O/P Voltage)	\pm 10% @ 115 Vac & 230 Vac input, 10-100% load (Slew Rate: 2.5 A/ μ S, 50% duty cycle @ 5 Hz & 10 kHz)	
Start-up with Capacitive Loads	10,000 μ F Max	5,000 μ F Max
Functional	DC OK Relay Contact	30 V / 1 A The relay contact are normally "ON" (closed) when the output (Vout) is greater than 90% typ. of its rated value.
	Remote Control	Remotely control the power supply unit to turn ON/OFF by using an external DC source for power "ON" with 0~0.5V, power "OFF" with 5V~12.5V.
	Current Sharing	Maximum with 4 units parallel operating, Please refer to page 13 for more details.

*3 PARD is measured with an AC coupling mode, 5cm wires, and in parallel to end terminal with 0.1 μ F ceramic capacitor & 47 μ F electrolytic capacitor. PSU need to burn in around 5 minutes when ambient temperature \leq 0°C.

	Remote	AWG 22-16	AWG 22-16
	Parallel	AWG 22-16	AWG 22-16
Mounting Rail	Standard TS35 DIN Rail in accordance with EN 60715		
Noise (1 Meter from power supply)	Sound Pressure Level (SPL) < 25 dBA		

*4 The torque at the screw terminal connector shall not exceed 5.2 Kgf.cm. (4.5 lbf.in).

Environment

Surrounding Air Temperature *5/6	Operating	-40°C to +80°C (Please refer to page 9 derating curve)	
	Storage	-40°C to +85°C	
Power De-rating	Temperature	> 60°C de-rate power by 2.5 % / °C, > 70°C de-rate power by 3.5% / °C	
	Input Voltage	< 100 Vac de-rate power by 1% / Vac < 200 Vdc de-rate power by 0.3% / Vdc	
Operating Humidity	5 to 90% RH (Non-Condensing)		
Operating Altitude	0 to 5,000 Meters (16,400 ft.)		
Shock Test	Non-Operating	IEC 60068-2-27, Half Sine Wave: 50 G for duration of 11 ms; 3 times per direction, 9 times in total	
Vibration	Non-Operating	IEC 60068-2-64, Random: 5 Hz to 500 Hz (2.09 G); 20 min per axis for all X, Y, Z direction	
	Operating	IEC 60068-2-6, Sine Wave: 10 Hz to 500 Hz (2G peak); 10 min per cycle, 60 min for X, Y, Z direction	
Over Voltage Category	II (Compliance to EN 61558-1 OVC III with 2000 meters altitude)		
Pollution Degree	2		

*5 When operating at temperatures below -30°C, the PSU may require a few seconds to "bounce" before completing a cold-start power-up.

*6 For power de-rating from 60°C to 80°C, see power de-rating on page 9.

Engineering Data

Output Load De-rating VS Surrounding Air Temperature

Fig. 1 De-rating for Vertical Mounting Orientation

> 60°C de-rate power by 2.5 % / °C
 > 70°C de-rate power by 3.5% / °C

Note: When operating at temperatures below -30°C, the PSU may require a few seconds to "bounce" before completing a cold-start power-up.

Note

1. Power supply components may degrade, or be damaged, when the power supply is continuously used outside the shaded region, refer to the graph shown in Fig. 1.
2. The power supply will have a longer rise time when the ambient temperature range is -30°C to -40°C.
3. If the output capacity is not reduced when the surrounding air temperature > 60°C, the device will run into Over Temperature Protection. When activated, power supply will latch off, until the surrounding air temperature is lowered or the load is reduced as far as necessary to keep the device in working condition, and require removal/re-application of input AC voltage in order to restart.
4. In order for the device to function in the manner intended, it is also necessary to keep a safety distance as recommended in the safety instructions while the device is in operation.
5. Depending on the surrounding air temperature and output load delivered by the power supply, the device can be very hot!
6. Need to consider power de-rating if Surrounding Air Temperature is > 60°C.
7. If the device has to be mounted in any other orientation, please leave a message via the [Contact Us](#) form.

Output Load De-rating VS Input Voltage

Fig. 2 De-rating for AC & DC Input Voltage

< 100 Vac de-rate power by 1% / Vac
 < 200 Vdc de-rate power by 0.3% / Vdc

- No output power de-rating for the input voltage from 100 Vac to 277 Vac & 200 Vdc to 400 Vdc

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Assembly & Installation

The power supply unit (PSU) can be mounted on 35 mm DIN rails in accordance with EN 60715. The device should be installed with input terminal block at the bottom.

Each device is delivered ready to install.

Mounting

Fig. 3.1 Mounting

Snap on the DIN rail as shown in Fig. 3.1:

1. Tilt the unit upwards and insert it onto the DIN rail.
2. Push downwards until stopped.
3. Press against the bottom front side for locking.
4. Shake the unit slightly to ensure that it is secured.

Dismounting

Fig. 3.2 Dismounting

To uninstall, Delta provides an easy way to pull or slide down the latch with screw driver as shown in Fig. 3.2. Then slide the power supply unit (PSU) in the opposite direction, release the latch and pull out the power supply unit (PSU) from the rail.

Safety Instructions

Vertical Mounting

- ALWAYS switch mains of input power OFF before connecting and disconnecting the input voltage to the unit. If mains are not turned OFF, there is risk of explosion / severe damage.
- To guarantee sufficient convection cooling, keep a distance of 40 mm (1.57 inch) above and 20 mm (0.79 inch) below. If load is less than 50%, lateral distance can be 0 mm (0 in). In case the adjacent device is a heat source, the lateral distance will be 15 mm (0.59 inch) for 80% load or > 25 mm (0.98 inch) lateral distance condition for 100% load @ 60°C ambient temperature.
- Note that the enclosure of the device can become very hot depending on the surrounding air temperature and load of the power supply. Risk of burns!
- The main power must be turned off before connecting or disconnecting wires to the terminals.
- DO NOT insert any objects into the unit.
- Hazardous voltages may be present for up to 5 minutes after the input mains voltage is disconnected. Do not touch the unit during this time.
- The power supplies are built in units and must be installed in a cabinet or room (condensation free environment and indoor location) that is relatively free of conductive contaminants.
- For detailed product installation and notice, please refer the user manual.

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Functions

DC OK Relay Contacts and LED Indicator Characteristics

DC OK Relay Contacts Status	Characteristics
Contact closes	The output voltage > 90% typ. of its steady state set value.
Contact opens	The output voltage < 88% typ. of its steady state set value.

Operating Status	DC OK (Green LED)	DC OK Relay Contact
Normal Operation	ON	Closed
Overload (Hiccup Mode)	INTERMITTENT	INTERMITTENT
Output Short Circuit	INTERMITTENT	INTERMITTENT
Over Temperature	OFF	Open
No Input Power	OFF	Open
Over Voltage Warning (OVW)	Flash / 1 Hz	Closed
External Over Voltage Warning (EOVW) (Back EMF Situation)	Flash / 5 Hz	Closed

Remote Control Function

Output ON/OFF remote control could be achieved through applying voltage to the remote ON/OFF connector. Connect an external DC power supply and apply the specified voltage below to control the output.

R _i	External DC Source		Input Current
	Output ON	Output OFF	
1.5KΩ	0V-0.5V	5V-12.5V	20mA max.

Notes

1. Remote ON/OFF circuits are isolated from input, output and PE.
2. Please check if the polarity of the wire connector is the same as the external DC source. If not, the power would not turn on and the internal components may be damaged.
3. You do not need an external resistance R₀ for current limit while the output voltage of external DC source is within the range of 5-12.5 V. If the output voltage exceeds 12.5 V, please use the following equation for the value of current limit resistance R₀.

$$R_0 = \frac{V_{cc} - (3.5 + 0.006R_i)}{0.006}$$

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Power Boost

Power Boost is the reserve power available constantly that allows reliable startup to support sudden and short spike of loads with high inrush current typically during turn on to remove the need of more expensive higher rated power supply unit. After the output has reached its steady state set value, the power supply can support surge loads with a higher short-term power demand up to 150% of maximum rated load (I_o Max), for a maximum duration of 5 seconds. The Power Boost function can also be applied on a repetitive basis, provided that the average (RMS) output power does not exceed the continuous operating rating. Please refer to the duty cycle calculation below.

Fig. 4 Duty Cycle Calculation

$$Duty\ cycle\ (\%) = \frac{T_p}{Total\ Time}; (T_p \leq 5\ sec)$$

$$Average\ Output\ Power\ (P_{Avg}) = \frac{(Power\ Boost \times T_p) + (Non-Peak\ Power \times T_N)}{Total\ Time}$$

or

$$Non-Peak\ Power = \frac{(P_{Avg} \times Total\ Time) - (Power\ Boost \times T_p)}{T_N}$$

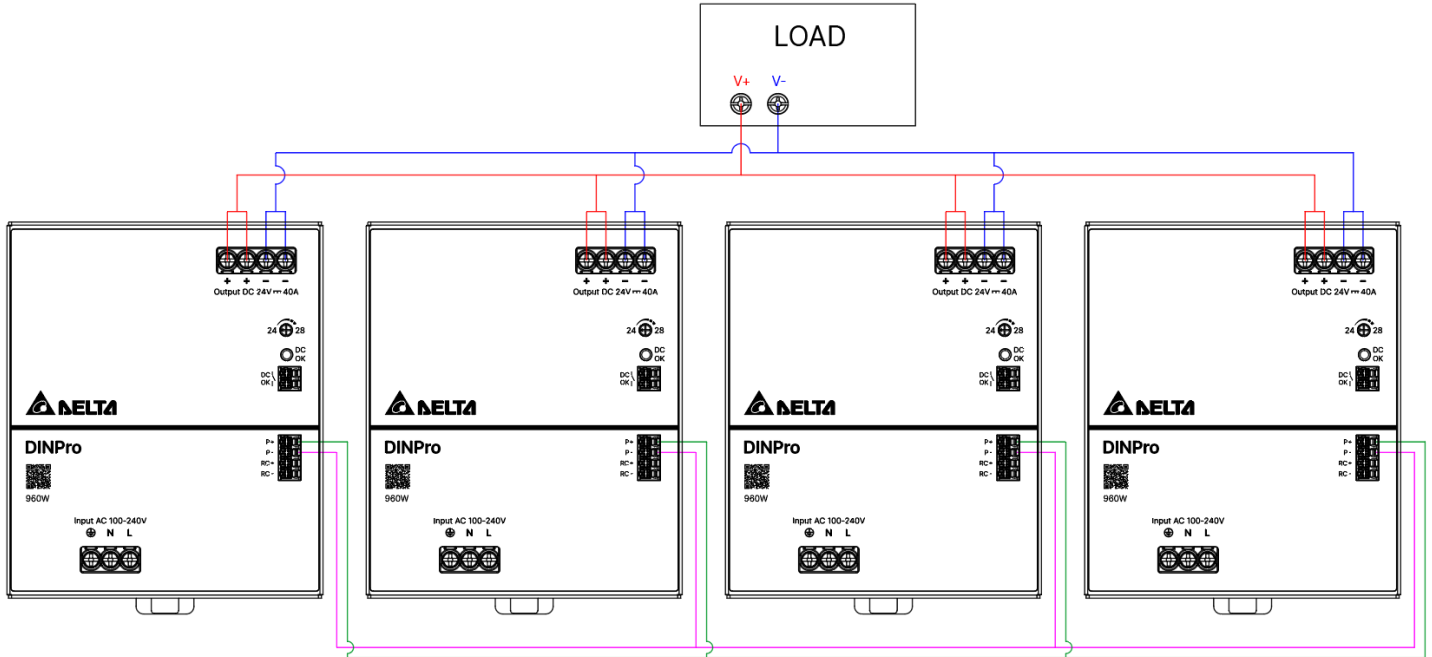

■ An example of Power Boost and Average Output Power

Power Boost	Peak Power (W _P)	Power Boost Duration (T _P)	Duty Cycle	Non-Peak Power (W _N)	Non-Peak Power Duration (T _N)	Total Time (T)
150%	1440W	5 sec	12.5%	891.43W	35 sec	40 sec

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Current Sharing Wiring

Test Setup Guideline:

- (1) The output voltage tolerance of each PSU during parallel operation should be adjusted to output voltage less than 0.2V.
- (2) For parallel functions, the output power of each PSU is defined as a maximum of 90% load ($N \times 90\%$).
- (3) A maximum of four units can be operated in parallel. For more details, please contact Delta's team.

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

■ Graph illustrating the Start-up Time, Rise Time, and Hold-up Time

Start-up Time

The time required for the output voltage to reach 90% of its final steady state set value, after the input voltage is applied.

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state set value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 95% of its steady state set value.

Inrush Current

Inrush current is the peak, instantaneous, input current measured and, occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Dynamic Response

The power supply output voltage will remain within $\pm 10\%$ of its steady state value, when subjected to a dynamic load from 10% to 100% of its rated current.

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Overload & Overcurrent Protections (Auto-recovery)

The power supply's Overload (OLP) and Overcurrent (OCP) Protections will be monitored by internal counter when output current (I_o) is 125~205% of maximum rated load (I_o Max). After counter reaches the limit value (typically 5s), output current will be limited to 150% typ. (refer to ① below) and output voltage (V_o) will start to droop. Once V_o is below approximately area, the power supply will start to operate in "Hiccup mode" as described in short circuit protection. The power supply will recover once the fault condition due to OLP or OCP is removed, then I_o is back within its specified limits.

Overvoltage Protection (Auto-recovery)

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 4 under "Protections".

Short Circuit Protection (Auto-Recovery)

The power supply's output Short Circuit Protection function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

Over Temperature Protection (Auto-recovery)

As described in load de-rating section, the power supply also has Over Temperature Protection (OTP). In the event of a higher operating temperature at 100% load; or, when the operating temperature is beyond what is recommended in the de-rating graph, the OTP circuit will be activated. When activated, power supply will latch off, until the surrounding air temperature drops to its normal operating temperature or the load is reduced as recommended in the de-rating graph. Removal/re-application of input AC voltage will then be required in order to restart.

DIN Pro Series DIN Rail Power Supply

DRF-960W Series / DRF-□V960W1PBA

Operating Connection

DC Input Operation

- DC input voltage range 100-400 Vdc

Fig. 5 DC Input Operation Connection Diagram

Step 1.

Use a battery or similar DC source.

Step 2.

Connect +pole to L and -pole to N.

Step 3.

Connect the PE terminal to an earth wire or to the machine ground.

Others

Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to PSU.deltaww.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.
